

Domestic gas is an essential commodity linked to food security, the availability of this substance and prices stability is occupied the great importance in food access

#### The problem:

Supply and prices status of domestic gas was not stable during 2019, there was continuous crises in many governorates, that led to increase its prices in high form, therefore increase the food access challenges and rising the level of poor and food insecurity for citizens.

and  
Long queues

#### The most important reasons:

- ❖ Lack of approved allocations for governorates from the Yemeni Gas Company (Marib).
- ❖ Poor control of private domestic gas filling stations as well as authorized agents resulting in non-compliance with the company's prices.
- ❖ The proliferation of small gas filling stations in unsafe locations that pose a threat to the population, some of which are without permits and do not respect safety regulations, and gas is constantly available compared to official stations.

#### Recommendations:

- ❖ Increasing the allocation of domestic gas for the governorates while activating control over the sale and distribution of household gas cylinders and taking strict measures against violators, this will lead to price stability and reduced manipulation.
- ❖ Withdrawing the expired domestic gas cylinder or carrying out comprehensive maintenance in order to protect the consumer health.
- ❖ Closing of the unlicensed small gas stations (pumps) that are uncommitted with the company's set prices.
- ❖ Find a safe sites for small gas stations, far away from overpopulation.
